Maastricht, Netherlands

linkedin.com/in/evlogjia-stefanidhi-8aab45270

Greek national · EU citizen

Final-year BSc Econometrics & Operations Research student who works on the quantitative side of policy questions and translates the results for people who do not read regressions. Comparative euro-area analysis in my thesis, applied econometrics on live organisational data in my current internship, and hands-on experience chairing a committee that planned and delivered a large multi-stakeholder event. Fluent in both OECD working languages: English (C1) and French (B2). Available full-time for six months from September.

Experience

Venture Analyst Intern, Strategy & Analytics May 2026 – Present
Goatstarter Ventures B.V., Amsterdam

- Built a **data-driven scoring model in Python** to assess applicants to the Goatstarter accelerator programme, replacing an ad-hoc review process
- Analysed historical cohort data to identify success signals among founders, using **regression and classification methods**
- Modelled programme **unit economics**: cost per accepted participant, acquisition cost, conversion, retention and expected return
- Designed the **structured selection rubric** now used by the team, turning qualitative judgements into comparable criteria
- Presented findings directly to decision-makers as input to selection and funding decisions

Chair, Lustrum Committee Sep 2024 – Mar 2025
Vectum, Study Association for Econometrics & Operations Research, Maastricht University

- Led a **team of six** to plan and deliver the association's lustrum programme, including a gala evening and an alumni networking event
- Owned **logistics, budgeting and stakeholder communication** end to end, coordinating between students, alumni, university staff and external venues
- Ran the outreach that brought alumni and partner organisations into the programme

Research & Quantitative Projects

Bachelor's Thesis: Monetary Policy Transmission in the Euro Area, Low-Cash versus High-Cash Economies Graded 9.0/10
Supervisor: Enrico Wegner, Maastricht University, June 2026

- Estimated **country-level structural VARs for thirteen euro-area economies** using high-frequency monetary policy surprises from the Euro Area Monetary Policy Database
- Pooled the impulse responses in a **cross-country regression** interacting each horizon with the country's cash share; higher cash usage is associated with a weaker GDP response, robust to dropping any single country
- Implication: a digital euro, by drawing cash transactions into the banking system, could strengthen transmission

Policy impact assessment · Stata Maastricht University
➤ Assessed the economic impact of selected public policies using applied econometric methods, and wrote up the results for a non-specialist reader

Forecasting and optimisation case study · Julia, Java Maastricht University
➤ Applied forecasting and optimisation methods to analyse and improve the operations of an industrial firm (SABIC)

Time-series analysis of Dutch climate trends · R Maastricht University
➤ Built and validated a time-series model of long-run temperature trends in the Netherlands

Education

BSc Econometrics & Operations Research

Maastricht University, School of Business and Economics

Final year · Expected graduation 2027

Semester Abroad

Università di Roma Tor Vergata

Completed February 2026

Languages

Albanian	Native
English	C1
French	B2
Italian	Basic professional
Turkish	B1
Greek	Basic

Skills

STATISTICAL & PROGRAMMING

Python, R, Stata, Julia, Java, LaTeX, GitHub

METHODS

Econometric modelling, regression & classification, time series, forecasting, optimisation, mathematical statistics

COMMUNICATION

Report writing, presenting results to non-technical audiences, Microsoft Office incl. PowerPoint

Selected Coursework

Econometric Methods I & II · Macroeconomics · Macroeconomics & Finance · Microeconomics · Mathematical Statistics · Optimization · Operations Research · Probability Theory · Institutional Economics · Market Design

Interests

Monetary policy · Macroeconomics · Regional and social policy · History · Arts
